Date :

Experiment NO: 04-A.

Create a simple Mobile using jquery Mobile.

Aim:-

Create a simple Mobile Website using Jquery Mobile.

Theory:-

Jquery Mobile:-

Jquery Mobile is a user interface framework, built on jquery core and used for developing responsive websites or applications that are accessible on mobile, tablet and desktop devices. It uses features of both jquery and jquery UI to provide API features for mobile web applications. This tutorial will teach you the basics of jquery Mobile framework. We will also discuss some detailed concepts related to jquery Mobile.

Why use jquery Mobile?

- It creates web applications that will work the same way on the mobile, tablet and desktop devices.
- It is compatible with other frameworks such as, PhoneGap, WinLight, etc.
- It provides a set of touch-friendly form inputs and UI widgets.

Features of jquery Mobile.

- It is built on jquery core and "write less, do more" UI framework.
- It is an open source framework, and cross-platform as well as cross-browser compatible.
- It is written in javascript and uses features of both jquery and jquery UI for building mobile-friendly sites.

Download Jquery Mobile:-

Back WAD lab practical manual

It is an open source framework, which is platform as well as cross-browser compatible.

32 of 48 It is in javascript and uses features of both and jquery UI for building mobile-friendly sites

Download jquery Mobile:
When you open the link <https://jquerymobile.com>,
You will see there are two options to download jquery mobile library.

click the Stable button, which leads directly to a file containing the CSS and JQuery files, for the latest version of jquery mobile library. Extract zip file contents to a jquery Mobile directory.

This version contains all files including all dependencies, a large collection of demos, and even the library's unit test suite. This version is helpful to getting started.

Conclusion: Thus we have created a simple mobile website using jquery Mobile.
